Abstract (en)

[origin: WO2022233775A1] Method for automatically measuring and/or obtaining parameters from systems and/or antennas for determining directions of incidence of electromagnetic waves, in particular direction-finding systems and/or direction-finding antennas, using a transmission device that is arranged on an unmanned aerial vehicle and that transmits signals, having the steps of: a) using the unmanned aerial vehicle to position the transmission device at a predefined location relative to the systems and/or the antennas, b) transmitting at least one signal by way of the transmission device, said signal being receivable by the systems and/or antennas, c) receiving the signal transmitted by the transmission device by means of the systems and/or antennas for determining directions of incidence of electromagnetic waves, d) ascertaining actual measured values and/or obtaining actual parameters from the received signal, in each case in relation to the predefined location, by means of a measuring device, and repeating steps a) to d) for at least one further predefined location.
