Abstract (en)
[origin: WO2022233716A1] The invention proposes several alternatives of how to electrically connect two electronic components (2, 15) of a chip card to one another. According to the invention, two contact terminals of one of the two electronic components (15) are electrically connected to each other either directly or via associated contact pads (14B, 14C) inside the card body (1).
