Abstract (en)

[origin: WO2022233602A1] The present invention relates to a method for constructing a model (MSI) simulating at least one chemical reaction, which constructs an intermediate model by means of an artificial neural network (RNA) and of a training database (BAP), and that then constructs the simulating model by adding an additional mass-conservation layer (RNC) to the artificial neural network (RNA). Furthermore, the invention relates to a method for simulating (SIM) a chemical reaction that implements the constructed simulating model (MSI).
