Abstract (en)

[origin: WO2022236140A1] Methods, apparatuses, and computer readable storage medium for PUSCH repetitions and SRS resource sets are provided. An example method includes receiving a configuration of a first SRS resource set and a second SRS resource set. The example method further includes receiving, from a network entity, DCI for an UL transmission, the DCI indicating the first SRS resource set and the second SRS resource set. The first/second SRS resource set is respectively associated with a first/second beam. The example method further includes transmitting, to the network entity, a first set of repetitions of a PUSCH based on the first SRS resource set and a second set of repetitions of the PUSCH based on the second SRS resource set in an order based on information received in the configuration of the first SRS resource set and the second SRS resource set or in the DCI scheduling the UL transmission.
