Abstract (en)
[origin: WO2022238240A1] An aerosol generation device (2) comprises a receiving interface (4) to receive an aerosol generation unit allowing a user to inhale, a sensor (5) to detect a user's inhalations, and a controller (6) configured to determine information from N user's inhalations detected during a calibration procedure without aerosol generation, with $N \geq 1$, this information being used for determining an inhalation profile for the user.
