Abstract (en)

[origin: WO2022237926A1] The invention relates to a painting-agent conducting device, to a spray gun, and to an assembly, wherein a mechanical guide extending in parallel with the outlet line is arranged on an exterior of the supply line. The problem addressed by the invention is that of developing known spray guns such that particularly good stability is achieved in a simple manner. This is preferably even achieved with as little material use as possible or using low-cost materials.
