Abstract (en)
The present application discloses a laundry treatment device and a deodorization control method and apparatus therefor, and a storage medium. The deodorization control method comprises: determining a deodorization type of a piece of clothes to be treated; and controlling, on the basis of the deodorization type, the laundry treatment device to run a corresponding deodorization control program, wherein a deodorization control program of each deodorization type is different on the basis of a control policy of a condensate water supply valve and/or a steam generator. In this way, a control strategy of the condensate water supply valve and/or the steam generator can be adjusted according to different deodorization types, such that the deodorization effects of different smells on the piece of clothes can be improved in a targeted manner to satisfy different requirements of people for eliminating odors.
