Abstract (en)
A device (1) for connecting a first construction element (2) and a second construction element (4), comprising: a first connecting element (3) which is connected to the first construction element (2) and which comprises a connecting piece (10), a second connecting element (5) which is connected to the second construction element (4) and comprises a recess (7) characterized in that a transverse dimension of the recess (7) decreases along at least a portion of the length thereof in a insertion direction (A), in that the device furthermore comprises a coupling element (6) with a cavity (8) which is configured to accommodate at least a portion of the connecting piece (10), and in that the coupling element (6) is configured to be inserted into the recess (7) in the insertion direction (A) up to a secure limit position in which it adjoins the walls of the recess (7).
