Abstract (en)  
[origin: WO2022239172A1] This refrigeration cycle device comprises: a main circuit in which a low-stage compressor, an oil cooler, a high-stage compressor, an oil separator, a condenser, a first expansion valve, and an evaporator are connected in a loop by refrigerant piping and through which a refrigerant circulates in this order; and an oil return circuit, one end of which is connected to the oil separator and the other end of which is connected to a first junction that is on the discharge side of the low-stage compressor and that is on the inlet side of the oil cooler, for returning the oil separated by the oil separator to the main circuit.
