Abstract (en)

[origin: WO2022244023A1] A powered agricultural tool comprises a machine body, a cutting tool jutting out of the machine body, an engine suitable to operate the cutting tool and a control unit configured to detect an operating parameter of the motor and/or cutting tool, and to generate a performance signal representative of said operating parameter, as well as identifying a degree of efficiency of an operating state of the motor and/or tool; the tool further comprises a display device for displaying a visual representation of the performance signal.
