Abstract (en)

[origin: WO2022243038A1] The present invention relates to a process for preparing polymerization-prone, in particular hydroxy-functional compounds, more particularly (meth)acrylates, using at least one suitable reactor, an intermediate container in which the raw solution formed in the reactor is temporarily stored before it is supplied to a suitable distillative purification apparatus, from which in turn the polymerization-prone compound is obtained as specified.
