Abstract (en)  
[origin: WO2023025704A1] The invention relates to a driver element (10) for a vehicle window lifter (2), having a pane holder (28) for fastening to a window pane (4), and a rail slider (22) for guiding on a guide rail (14), wherein the pane holder (28) has two clamping jaws (32) which form a clamping gap (34) for receiving the window pane (4), wherein at least part of a screw element (36) vertically penetrates the clamping jaws (32), the screw element (36) having a threaded portion (40) and a head portion (38), wherein the threaded portion (40) can be screwed into a threaded opening (40) in the rail slider (52) in order to brace the clamping jaws (32) in relation to each other such that the window pane (4) is clamped, wherein the screw element (36) is at least partially guided through a passage opening (44) having an annular collar (48) which is projectingly moulded thereon, and wherein, in a pre-assembly position (V), the screw element (36) is interlockingly and/or frictionally engagingly held on the annular collar (48).
