Abstract (en)

[origin: WO2022242791A1] The invention relates to a pendulum rocker damper (100) comprising, on its output section (108), in particular an output flange (109), stopper elements (112) for the input section (101) or stopper elements (112) on the input section (101) for the output section (108), in order to limit the relative displacement between the input section (101) and the output section (108). The stopper elements (112) are designed to be radially inside the rolling members (103) and their tracks.
