Abstract (en)

[origin: WO2023282837A1] The present invention relates to a pedal device (1 ) to be used for control of functions in a vehicle and a vehicle having such a pedal device (1). The pedal device (1 ) comprises a pedal (2) selectively switchable between a working position (2A) and a resting position (2B), and an actuator (3). The actuator (3) is connected with its first end (3a) to the pedal (2). The actuator (3) is moveable between a first position (3A) and a second position (3B) affecting the switching of the pedal (2) between the working position (2A) and the resting position (2B). The pedal device (1 ) further comprises a force device (4). A second end (3b) of the actuator (3) is connected to the force device (4). The force device (4) is arranged to affect the actuator (3) to move between the first position (3A) and the second position (3B).
