Abstract (en)  
[origin: WO2022245343A1] Described herein are techniques for facilitating push provisioning of a user payment source into a user's digital wallet without the user having a physical card. The techniques allow an issuer to provide a button in an issuer's application for the user to simply push the button to request that the payment source be imported into a pay wallet or a merchant. In this way, the payment source information is "pushed" into the pay wallet. Using push provisioning, the user need not enter any physical card information. The described techniques generate a chain of trust that can be used to ensure that a user, through an issuer and using a gateway, authorizes a token service provider to provision the payment source into the pay wallet or merchant.
