Abstract (en)  
The present invention relates to a barrel (2) of a clothing processing machine having a drying function, the barrel (2) comprising an opening (9) through which air can pass outward from inside the barrel (2), the opening (9) being provided with a filter screen (11), such that air in the barrel (2) is permitted to flow outward after passing through the filter screen (11). The present invention further relates to a clothing processing machine (1) having a drying function and comprising a barrel (2), wherein an air driving means (4) can drive air through the filter screen (11) from inside the barrel (2) and then into an air channel (23) downstream of the filter screen (11). In the barrel (2) and clothing processing machine (1) according to the present invention, the filter screen (11) of the barrel can intercept most of the fluff in drying air, reducing accumulation of fluff downstream of the filter screen (11), so that the clothing processing machine (1) maintains a more stable drying effect.
