Abstract (en)
A roof panel (100), comprising a male locking profile (1) and a female locking profile (2). The male locking profile (1) comprises two male extensions (6) extending to an upper side (UP) of the roof panel and a channel (7) between the male extensions (6). The channel (7) has a bottom (8) connecting the male extensions and an open top (9). The bottom (8) provides an attachment surface configured to receive fasteners (10). The female locking profile (2) comprises two female extensions (11) extending to the upper side (UP) of the roof panel, said female extensions (11) creating a female groove (12) therebetween. The female groove (12) has a closed top (13) connecting the female extensions, and an open bottom (14). The female groove (12) is compatible with the male locking profile (1) for engaging therewith for creating a tongue- and-groove joint (15) locking two adjacent roof panels to each other.
