Abstract (en)

The present invention relates to a lighting device having a vibration sensor. The lighting device comprises a housing (5), at least one component (3, 6a, 16) elastically connected to the housing (5) and at least one sensor (4, 12) configured to detect vibrations in an environment of the lighting device (1) by detecting a movement of the at least one component relative (3, 6a, 16) to the housing (5) caused by the vibrations.
