Abstract (en)  
The invention provides a dual-flow ventilation unit (10) for extracting exhaust air from at least one room and blowing fresh air into said at least one room, said dual-flow ventilation unit (10) having a casing (12) comprising a first and a second main walls (22, 24) opposite each other and a plurality of lateral walls (26, 28) extending between said first and second main walls, said casing comprising:- a thermal exchanger (42),- a first (21) and a second (17) flow circuits extending at least partially through the thermal exchanger (42),- ventilation means for moving air through said first and second flow circuits, said ventilation means comprising a fan comprising a fan air inlet for sucking air through the first flow circuit, characterized in that said fan air inlet is at least partially oriented towards said exchanger air outlet.
