Abstract (en)
[origin: WO2023016660A1] The invention relates to a flat flexible web-shaped textile structure, in particular a web-shaped textile structure which can be rolled up, consisting of or comprising a flexible carrier layer with a longitudinal extension, a plurality of flat longitudinal electric conductor paths with respect to the carrier layer with the longitudinal extension, wherein the plurality of flat electric conductor paths are provided on the front face and/or on the rear face of the carrier layer or are integrated into the carrier layer, and a flexible magnetizable holding layer. The carrier layer forms the holding layer, or the holding layer is formed separately from the carrier layer. In particular, the holding layer and the carrier layer form a layer composite, said holding layer being provided on the front face or on the rear face of the carrier layer in particular.
