Abstract (en)

A remotely operated unmanned turret (1) intended to be mounted on a supporting platform, wherein the turret may comprise some operational equipment, while it is devoid of crew ; wherein the first ballistic protection unit (11) is designed to allow detonation, penetration and expansion cone dispersion of energetic material (10) and/or shockwave propagation (9) within the air gap (6) ; and wherein the second ballistic protection unit (12) is designed to act as a barrier between the turret (1) and a chassis-crew compartment (7) of the supporting platform, so as to prevent further over-pressure and/or blast propagation into the chassis-crew space (7) and/or to absorb dispersed energetic material.
