Abstract (en)

[origin: WO2022248192A1] The invention relates to a method by way of which the processing of plants (10) is rendered time- and cost-efficient. For this purpose, at least one plant (10) or a part of the plant (10) is detected by an image-recognition unit. The patterns and characteristics of the plants (10) recognized by the image-recognition unit are used to propose to a person at least one option for processing the plant (10). Upon selection of at least one option by the person the plant (10) or the part of the plant (10) is autonomously or automatically processed by a processing means (22).
