Abstract (en)
[origin: WO2022234510A1] The present invention relates to a button of the "nail" type which is completely removable and can be applied to a garment by means of standard punching machines unlike similar buttons of a known type. These characterizing features allow the temporary removal of the button to preserve delicate decorative elements before washing, or the definitive removal of the button to reduce the environmental impact when the garment reaches the end-of-life. This button can be applied on any type of fabric, preferably on jeans fabric.
