Abstract (en)

[origin: WO2022254361A1] The invention relates to an accessory comprising a device for supporting and holding the upper part of the body which has at least one means (3D, 3G) for supporting and holding each forearm (4D, 4G). Each support and holding means is angularly positioned relative to the vertical in the device, and each support and holding means comprises at least one member for supporting at least the thumb (P) of the hand (M) in a position in which the longitudinal axis (A) of the forearm, the wrist and the fingers of the hand are aligned in a single direction.
