Abstract (en)
[origin: WO2022254373A1] The invention relates to a medical bed for a patient comprising several elements including a base frame that extends along a horizontal plane; a rectangular-shaped backrest capable of being moved upwards, downwards and at different angles inclined relative to the horizontal plane, the backrest being arranged on a hub attached to the base frame, the backrest comprising movable arm supports on two opposite sides, the backrest further comprising, on a third side, a headrest arranged to support a patient's head and, on the fourth side, a seat extended by movable leg supports that are arranged to support a patient's legs, the bed comprising an individual motor for moving the headrest, and two pairs of two motors for each leg support, each motor being capable of being individually controlled so as to prevent the formation of bedsores. The bed comprises a device for recovering organic matter.
