Abstract (en)
[origin: WO2022248483A1] The invention relates to a container closure (11) for closing a pouring opening (29) of a container (27) which is filled with a liquid, having a closure cap (13) with a free edge (19), a shell (17) and a top plate (21), a tamper-evident ring (23) which is designed to be retained form-fittingly on a container neck (25) of the container, and a retaining element (31a, 31b, 35) with a first and a second end, wherein the first end is firmly connected to the free edge (25) of the closure cap (15) and the second end is firmly connected to the tamper-evident ring (15). The closure cap (13) is transferable from a closure position, in which it closes the pouring opening (29), into an open position, in which it fully opens up the pouring opening (29), and vice versa. Provided on the inner side, which comes into contact with liquid, of the top plate (21) is an adhesion surface (36) for improving the adhesion of liquid.
