Abstract (en)

[origin: WO2022248173A1] The invention relates to a domestic refrigeration device (1) comprising an inner container (4) that has walls (4a, 4b, 4c, 4d, 4e), by means of which a volume area (11) is delimited; a receiving area (3) for food; and an air channel system (15) with at least one air channel (16) which is delimited by a wall (4a to 4e) of an inner container (4) and a separate channel wall (10) of the domestic refrigeration device (1), wherein the channel wall (10) delimits the receiving area (3) such that the air channel (16) arranged in the volume area (11) is separated from the receiving area (3), and the domestic refrigeration device (1) has a design part (17) which is arranged on the front face of the channel wall (10) such that the channel wall (10) is covered by the design part (17) and/or a design part (17) is attached at least to a wall (4a, 4b, 4d, 4e) of the inner container (4), said design part (17) having a hot-stamped film (19) which is applied onto a base (18) of the domestic refrigeration device (1) by means of a hot-stamping process.
