Abstract (en)

[origin: WO2022254002A1] The invention relates to a method for executing a transaction between a transaction implementation terminal (TProf) and a communication device (Dton) which is located near the transaction implementation terminal (TProf). Such a method comprises a step of preparing (A10) the transaction to be executed within the transaction implementation terminal (TProf), thereby outputting a set of intermediate transaction execution data; a step of transmitting (A20) the intermediate transaction execution data to the communication device (Dton); and a step of executing (A30) the transaction by the communication device (Dton) using the at least one item of intermediate transaction execution data and at least one item of personal data (Sgn, PIN) of the user who holds the communication device (Dton), such execution thereby outputting an execution result that is transmitted (A40) to the transaction implementation terminal (TProf).
