Abstract (en)

[origin: WO2022253813A1] One aspect of the invention relates to a photovoltaic cell (CELL) comprising a distribution track (DIS1) extending parallel to one edge (BA) and a plurality of collection fingers (COL), the photovoltaic cell being noteworthy in that the width (WDIS1) of the distribution track (DIS1) is larger than the width (WCOL) of each collection finger (COL); and in that a plurality of interconnect conductors (INT) are electrically connected to the distribution track (DIS1) and extend between said edge (BA) and the distribution track (DIS1); and in that it comprises at least one free segment (LC) of its face (AV), bounded at least partially by the distribution track (DIS1), the edge (BA) and two consecutive interconnect conductors (INT).
