Abstract (en)
[origin: WO2022253734A1] The invention relates to a vaporization device (20) for an inhaler, comprising an electrical resistance heating body (23) for vaporizing liquid (33), which has been brought into contact with the resistance heating body (23), by means of electrical energy. The resistance heating body (23) consists of a material, in which, in a temperature range around a vaporization temperature, the change in resistance per temperature interval is at least three times as great as in a temperature range around room temperature.
