Abstract (en)  
The present invention relates to an elevator arrangement exhibiting at least one cabin for a lift shaft, wherein the at least one cabin is guided by means of at least one cabin guide rail, wherein the elevator arrangement exhibits at least one guide rail for at least one counterweight, wherein the elevator arrangement exhibits a plurality of fixation bracket units coupling both the cabin guide rail and the at least one counterweight guide rail for fixation to at least one side of the lift shaft each in a specific/individual height position within the lift shaft in at least one fixing point, wherein the respective fixation bracket unit is configured for predefining the cabin guide rail's cross position as well as the cabin guide rail's lateral distance respectively with respect to the counterweight guide rail's position(s). This configuration also facilitates handling and mounting procedure.
