Abstract (en)

A heating and cooling system for collective residential housing units. The system includes: a collective heat pump, a plurality of residential housing units, one closed circuit for circulating a liquid between the collective heat pump and the residential housing units, and a control device for controlling the collective heat pump. The control device controls the temperature of the collective water pump and/or the maximum flow rate from the closed circuit to each of the housing units and/or the flow rate over a bypass on the closed circuit in function of the current needs of the residential housing units.
