Abstract (en)

[origin: WO2021250101A1] The invention relates to a hair drying and/or styling device and in particular to a hair drying device which can optionally be used to style hair. The invention may be configured as a unitary or stand-alone device or it may be configured as an attachment for another device such as a hair dryer. The hair drying and/or styling device has an air inlet, a body with an air flow space in communication with the air inlet, and an outlet plate with a large number of openings which are in communication with the air flow space. The outlet plate is concave and defines a volume which is surrounded by the outlet plate. A chosen section of hair can be inserted into the volume for drying and/or styling. The outlet plate is rotatable relative to the body, the rotatable outlet plate facilitating styling of the section of hair.
