Abstract (en)

[origin: WO2022261385A1] A system for sample, trial, and/or full-sized products includes a container defining at least one cavity, a product disk, a cosmetic product, an applicator, and an applicator engaging mechanism operably coupled with the applicator. The product disk includes a first side, a second side, a body extending therebetween, and a disk engaging mechanism. At least a portion of the first side of the product disk is selectively positionable adjacent to the at least one cavity of the container. The cosmetic product is at least partially disposed on the first side of the product disk. The applicator has first end that includes an applicator retention region. At least a portion of the second side of the product disk is positionable adjacent to the applicator retention region. The product disk is removably coupled with the cavity of the container and the applicator coupling mechanism.
