Abstract (en)
[origin: WO2022258571A1] A child restraint device, in particular child seat (10) and/or impact body (50), for attaching in a vehicle, or part of such a device, comprising at least one airbag comprising at least one inflatable airbag (71), wherein the airbag can be transferred from a non-inflated state into an inflated state, wherein the airbag (71) is at least substantially unfolded in the non-inflated state, and/or wherein, in the non-inflated state of the airbag (71), an outer surface of the airbag (71) is configured in such a manner that, for at most 25% of the outer surface, a respective outer surface perpendicular intersects the outer surface at a second point of the outer surface, and/or wherein, in the non-inflated state of the at least one airbag (71), at most 25% of the outer surface of the airbag lies directly on another part of the outer surface.
