Abstract (en)

[origin: WO2022258897A1] A vehicle comprises a structure (SV) comprising two right and left pillars (MR), each comprising a lower portion (PI) secured fixedly to a floor (PV), and two right and left reinforcing parts (PR) each secured fixedly to one of the lower portions (PI) and to the floor (PV), and having the general shape of an inverted bracket capable, by deformation, of absorbing at least some of the energy of a lateral impact experienced by the associated lower portion (PI).
