Abstract (en)

[origin: WO2022258901A1] The invention relates to a housing (1, 1') for an optical module of a lighting and/or signalling device of a motor vehicle, the housing (1, 1') having first (2, 2') and second (3, 3') parts of complementary shape that are obtained following injection-moulding of a thermoplastic material and of which at least one of the two parts (2, 2' or 3, 3') is provided partially with metallization zones (5), the housing (1, 1') having a predetermined cutting-line profile (P) defining a mechanical interface (4, 4') for the assembly of the first (2, 2') and second parts (3, 3') with one another; the interface (4, 4') being arranged on at least one of the edges of one of the two parts (2, 2' or 3, 3') provided with a metallization zone (5), in the vicinity of the metallization zone (5) in order to take account of moulding and metallization stresses.
