Abstract (en)

[origin: WO2022258636A1] Assembly comprising a bobbin (100) and a coil (101) arranged on the bobbin (100), for an electromagnetic actuator system in an automobile. A guiding member is attached to one of the at least one flange (103) of the bobbin (100). The guiding member (110), configured to guide the coil from the at least one flange (103) or to the limbs (105). The guiding member (110) includes a slope portion (113), that extends from the at least one flange (103) to one of the limbs (105) and a side portion (111). The side portion (111) is formed as a protrusion to change direction of the coil (101) and to facilitate support to the coil (101). Therefore, the guiding member (110) facilitates support and routes the coil (101) from the flange (103) towards one of the limbs (105).
