Abstract (en)
[origin: WO2023016645A1] The present disclosure relates to an eartip for a headphone or a headset device. The eartip comprises a flexible body designed to be at least partially insertable into an ear canal of a user. The flexible body surrounds a sound channel configured to direct sound to an outlet end of the sound channel, and towards the ear canal of the user. Further, the flexible body is formed by at least an inner material layer and an outer material layer. The flexible body also comprises one or more stiffening ridges in the outer layer, wherein the one or more stiffening ridges are arranged at a distal end of the flexible body, the distal end being opposite to the outlet end of the sound channel.
