Abstract (en)

An impact sensor system for a header (200) of an agricultural system (100) includes a damping feature (218, 600) configured to couple to the header (200) to attenuate vibrations due to initial contact between a crop and the header (200) to form attenuated vibrations. The impact sensor system also includes one or more sensors (220, 222, 602, 604) configured to couple to the header (200) and to generate signals in response to detection of the attenuated vibrations. The impact sensor system also includes a controller (510) configured to receive the signal and process the signals to determine a location of the initial contact between the crop and the header (200).
