Abstract (en)
An air conditioning unit, and a remote debugging method therefor and apparatus thereof are disclosed. The method includes: determining a detection stage in a trial operation process of an air conditioning unit, wherein the trial operation process of the air conditioning unit includes a plurality of detection stages, and each detection stage is provided with a corresponding data acquisition rule (S1); acquiring key point data of each detection stage according to the data acquisition rule corresponding to the detection stage (S2); and in response to ending of the trial operation process of the air conditioning unit, determining a trial operation result of the air conditioning unit, and uploading data according to the trial operation result, so that remote debugging is performed on the air conditioning unit by a cloud server according to the uploaded data of the air conditioning unit (S3).
