Abstract (en)

A content generation apparatus capable of easily confirming content, the information of which is registered in a blockchain, is provided. An image pickup apparatus 102 generates an image file and then immediately generates a hash value of the image file, and transmits image file information including the hash value to a management system 101. In response to receipt of a registration completion notification indicating that a process of registering the image file information in a blockchain is completed, the image pickup apparatus 102 adds, to the image file, registration-completed information indicating that the image file information is registered in the blockchain.
