Abstract (en)  
[origin: WO2022263668A1] An aerosol generating device (101) is described. The device generates an aerosol from aerosol-generating material. The device has a receptacle (212) comprising a peripheral wall (214) defining a heating zone (215) for receiving at least a portion of an article (110) containing aerosol-generating material. An elongate rib (700) protrudes into the heating zone. The elongate rib has an article locating face (704) arranged to space at least a portion of an article received in the heating zone from the peripheral wall to provide an airflow path between the article and the peripheral wall. The elongate rib extends at least partially circumferentially about the peripheral wall.
