Abstract (en)
[origin: WO2022263606A1] A bag (1) for a filter for filtration of particles in a gas flow, wherein the bag (1) comprises: a tubular outer layer (2) comprising a first end portion (3) and an opposite second end portion (4), and a tubular inner layer (5) configured to extend inside the tubular outer layer (2) from an open end portion (6) of the tubular inner layer (5) at the second end portion (4) of the tubular outer layer (2) at least partly along an extent of the tubular outer layer (2), to a closed end portion (7) of the tubular inner layer (5), wherein the tubular outer layer (2) is connected to the open end portion (6) of the tubular inner layer (5), and wherein the tubular inner layer (5) and the tubular outer layer (2) are shaped and sized such that a circumferential space (8) is formed between the tubular inner layer (5) and the tubular outer layer (2).
