Abstract (en)
[origin: WO2022263552A1] An occulting device (1) comprises a screen (2), a motorized drive device (7) and a configuration or maintenance terminal (32). The motorized drive device (7) comprises an electromechanical actuator (8) configured to be powered from a main electric power source (54), by way of an electric power supply cable (10). When the terminal (32) is electrically connected to the actuator (8) by way of the electrical connection cable (55) and of an electrical socket (33) of the terminal (32) and of an electrical connection device (30) of the actuator (8), the terminal (32) powers an electronic control unit (19) for controlling the actuator (8), the terminal (32) then forming a secondary electric power source. Furthermore, a value of a voltage of the power supply provided by the terminal (32) to the electronic control unit (19) is strictly less than a value of a voltage of the power supply provided by the main source (54) to the actuator (8) by way of the electric power supply cable (10).
