Abstract (en)

[origin: WO2022263575A1] The invention relates to a system for managing data on an environment of an endodontic instrument, which comprises: - an endodontic instrument, which is intended to undergo a number of life-cycle stages such as a logistical stage, a stage of use to provide endodontic care, and an end-of-life stage, the instrument being equipped with a unique identifier, and having recommended use parameters; - means for obtaining at least one real use parameter required of the instrument in a life-cycle stage; - means for reading the unique identifier during at least one life-cycle stage of the instrument; - a piece of computer equipment intended to be connected to the reading means and to the obtaining means, comprising a database, and executing a computer program. The computer program is configured to record, in the database, in at least one life-cycle stage, the read unique identifier of the instrument, the obtained real use parameter, a timestamp, and this record is authenticated.
