Abstract (en)

[origin: WO2022263749A1] The invention relates to an electronic system (10) comprising: an initial electronic device (7) comprising a lower connection terminal (9) and an upper connection terminal (11); a lower electrically conductive element (3) configured to be electrically connected to the initial electronic device (7); an electrically insulating spacer layer (5) configured to interact with the initial electronic device (7) in such a way as to ensure electrical insulation between the lower electrically conductive element (3) and the upper connection terminal (11); an upper electrically conductive element (13) configured to be connected to the upper connection terminal (11) of said at least one initial electronic device (7); a pre-existing structure giving access to the lower electrically conductive element (3) from an upper face of the electrically insulating spacer layer (5). The invention also relates to a method for producing such an electronic system (10).
