Abstract (en)
[origin: WO2022263769A1] The invention relates to a three-phase electric motor, formed by a stator part excited by three electric windings and a rotor (50) comprising a plurality of magnetised poles, the stator part having radially extending teeth, said stator part comprising: three consecutive wound teeth, each carrying a winding, in a first angular sector; and one to three non-wound complementary teeth, in a second angular sector complementary to the first angular sector.
