Abstract (en)

A processor of a foldable electronic device according to an embodiment of the disclosure may be configured to: display a user interface on a second display in a folded state of the foldable electronic device; detect a user input designated for content included in the user interface; display a visual cue corresponding to the content for which the user input is detected; detect whether the foldable electronic device is changed from the folded state of to an unfolded state by using the sensor module; and display the content corresponding to the visual cue on the first display when a state change of the foldable electronic device is completed. Various embodiments are possible.
