Abstract (en)
[origin: WO2022266697A1] A stabilised solution or formulation (a liquid or a thixotropic gel) of an antimicrobial solution packaged in a double-compartment packaging comprising a flexible container of variable volume therein enclosing the stabilised solution or formulation, said flexible container of variable volume being inserted in a pressure-resisting external container, and comprising a pressurised propellant that is capable of exerting pressure on said flexible container of variable volume and forcing said stabilised solution or formulation out of said flexible container of variable volume upon pressing an actuator that is operatively connected to an ejection valve, wherein the flexible container of variable volume enclosing the stabilised solution or formulation is made of polyethylene terephthalate (PET), and wherein the pressurised propellant is carbon dioxide.
